NOON 12 JULY 1978

EMPLOYMENT AND UNEMPLOYMENT, APRIL 1978

INQUIRIES

If you want to know more about these statistics ring Mr Terry Sharp on Canberra 526655 or our State office, or write to Information Services, ABS, P.O. Box 10, Belconnen, A.C.T. 2616.

For copies of this publication contact Information Services, Canberra 526627 or State offices.

1. EMPLOYED WAGE AND SALARY EARNERS

NOTE. As explained in *Population and Vital Statistics: June Quarter 1977* (3212.0), in estimating final population figures for the period June 1971 to June 1976 allowance has been made for underenumeration in the population census and for other factors. The final figures for June 1971 and June 1976 are considerably higher than those previously published for the two census dates, and it is apparent that the numbers of civilian employees derived from the 1971 population census, and used in determining the benchmarks for the employment estimates in this bulletin, are substantially understated. (See paragraph 6 below.) Consequently, the level of the employment series is too low. A revision of the series, using revised benchmarks and other data, will be undertaken as soon as possible. It is expected that the effect of the revision will be to raise the level of the current estimates by some 190,000 persons. Revised estimates should be available towards the end of 1978. In the meantime the unrevised series will provide a reasonable indication of current month-to-month movements.

The figures in this section generally relate only to civilian wage and salary earners, not the total labour force: they therefore exclude employers, self-employed persons, unpaid helpers and the unemployed. Also excluded, because of the inadequacy of current data, are wage and salary earners in agriculture and private households employing staff. For the sake of brevity, wage and salary earners are referred to in the tables as "employees". Defence forces are included in Table 2.

- 2. The estimates in Tables 1 to 7, except those relating to government employees and defence forces, are based on comprehensive data (referred to herein as "benchmarks") derived for the purpose from the population census of June 1971 and other sources. (See paragraph 6.) Month-to-month changes shown by current data (see paragraphs 7 to 9) are linked to the benchmark data to derive the monthly estimates.
- 3. Although the series generally measure reasonably well the short-term trends in employment in the defined field, they may be less reliable for longer-term measurement. There are conceptual differences between benchmark and current data, and changes in such factors as labour turnover, multiple jobholding and part-time working all affect the trend over longer periods. (See NOTE above.)

Concepts and definitions

4. The concepts and definitions applicable to these estimates are those adopted at the 1971 population census, which conformed closely to the recommendations of the Eighth International Conference of Labour Statisticians (Geneva, 1954). At the census the following questions were asked in respect of all persons fifteen years of age and over:

"Did this person have a full or part-time job, or business or farm of any kind last week (even if this person was temporarily absent from a job because of sickness, holidays, industrial dispute, etc.)?"

"Did this person do any work at all last week for payment or profit (even if this person was working only part-time or helping without pay in a family business)?"

Provided they had not been temporarily laid off by their employer without pay for the whole of the week, persons who answered "yes" to either of these questions were classified as employed. Persons in this category were classified as wage or salary earners if on their census schedule they were stated to be "a wage or salary earner" in the job they held in the previous week.

Government employment

5. Government employees comprise not only administrative employees but also all other employees of government bodies (Australian, State, local and semi-government) on services such as railways, road transport, banks, postal and telecommunications, air transport, education (including universities, colleges of advanced education, etc.), radio, television, police, public works, factories, marketing authorities, public hospitals (other than those run by charitable or religious organisations) and departmental hospitals and institutions.

Adoption of new benchmarks

6. As results from each successive population census become available it has been customary to derive from them new benchmarks for the monthly employment series, and to revise the published estimates for all periods subsequent to the date of the previous

census. Benchmarks for June 1971 were established by analysing data from the 1971 population census and other relevant sources such as special returns from government bodies and the Bureau's economic censuses and surveys. It should be noted that figures in this bulletin are subject to further revision as the results of later censuses and surveys become available.

Current data

- 7. The data needed to derive the estimates for periods subsequent to the benchmark date (June 1971) are obtained from three main sources, namely, (a) current payroll tax returns; (b) current returns from government bodies; and (c) some other current returns of employment (e.g. for hospitals); the balance, i.e. unrecorded private employment, is estimated. At June 1971 recorded employment obtained from the foregoing sources accounted for about 90 per cent of the employees in the industries covered, as determined by the benchmarks.
- 8. Current data supplied by reporting enterprises or establishments generally refer to persons on the payroll for the last pay-period in each month. Persons who are on paid leave or who work during part of the pay-period and are unemployed or on strike during the rest of the period are generally counted as employed. Those not shown on employers' payrolls because they are on leave without pay, on strike or stood down for the entire period are excluded.
- 9. In all States and Territories most employers paying wages in excess of a designated exemption level are required to lodge payroll tax returns. Certain Australian Government bodies, religious and benevolent institutions, public hospitals and other similar organisations are specifically exempted under the Australian and State Payroll Tax Acts. The following table shows details of recent exemption levels (in dollars per week):

| | Qld | W.A. | Other States | N.T. and A.C.T. |
|-------------------|-------|-------|-----------------|--------------------|
| Before Jan. 1976 | 400 | 400 | 400 | 400 |
| Jan. to Dec. 1976 | 800 | 800 | 800 | 400 |
| Jan. to June 1977 | 1,200 | 923 | 923 | 923 |
| July to Nov. 1977 | 1,600 | 923 | 923 | 923 |
| Dec. 1977 | 1,600 | 1,154 | 923 | 923 |
| From Jan. 1978 | 1,923 | 1,154 | 1,154 | 1,154 |

Industry

10. The industry classification used in this bulletin is the Australian Standard Industrial Classification (ASIC), described in the Bureau publication Australian Standard Industrial Classification (Preliminary Edition), 1969, Volume 1 (1201.0). This industry classification is not directly comparable with those adopted for population censuses before 1971 and used in the estimates for earlier periods.

Estimates for earlier periods

- 11. For the period June 1971 to June 1975 detailed industry figures for each State and Australia and the government employment series were published in a special bulletin *Employed Wage and Salary Earners*, June 1971 to June 1975 (6214.0). These estimates are now subject to substantial revision. See Note on page 1.
- 12. It is expected that in due course a revised series will be published for the period June 1966 to May 1971, classified according to ASIC. However, it may not be possible to provide as much industry detail as for June 1971 and subsequent periods. ASIC estimates cannot be derived for periods prior to June 1966.

⁽a) Australian Standard Industrial Classification (see page 2, paragraph 10), (b) Excludes ASIC Subdivisions 01 Agriculture and 02 Services to agriculture. (c) Excludes permanent defence forces. (d) Excludes ASIC Subdivision 94 Private households employing staff. (e) Includes industrial as well as administrative employees (see page 1, paragraph 5). (f) On 1 March 1978 South Australian and Tasmanian railway operations, previously under the authority of the State governments, were taken over by Australian National Railways. The affect of this change was to transfer approximately 9,500 employees from State government to Australian government.

⁽a) Includes persons employed in the Australian Capital Territory who reside in adjoining areas. (b) Excludes permanent defence forces. (c) Includes industrial as well as administrative employees. (See page 1, paragraph 5).

2. UNEMPLOYED PERSONS

The tables in this section contain (a) estimates of the total number of persons unemployed, derived from the monthly population survey, (b) the numbers registered with the Commonwealth Employment Service (CES) as unemployed, and (c) the number in receipt of unemployment benefit.

Total Unemployed Persons : Population Survey Estimates

- The population survey is based on a multi-stage area sample of private dwellings (about 30,000 houses, flats, etc.) and non-private dwellings (hotels, motels, etc.), the information being obtained from the occupants of selected dwellings by carefully chosen and specially trained interviewers, the interviews generally being conducted during the two weeks beginning on the Monday between the 6th and 12th of each month. The information obtained relates to the week prior to the interview (i.e. the survey week). Before February 1978, when the survey was conducted quarterly, the interviews were spread over four weeks, chosen so that the survey weeks generally fell within the limits of the calendar month. Particulars of the number of persons employed or unemployed, and of the total labour force, are published in the bulletin The Labour Force (6203.0).
- 3. For purposes of the survey, unemployed persons are those aged 15 years and over who were not employed during the survey week and:
 - (a) had actively looked for full-time or part-time work at any time in the four weeks up to the end of the survey week and:
 - (i) were available for work in the survey week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the survey week);
 - (ii) were waiting to start a new job within four weeks from the end of the survey week and would have started in the survey week if the job had been available then;

or

(b) were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the survey week (including the whole of the survey week) for reasons other than bad weather or plant breakdown.

This definition of unemployed persons conforms closely to that recommended by the Eighth International Conference of Labour Statisticians (1954).

4. Because the estimates for February 1978 and subsequent months are based on revised population estimates derived from the results of the 1976 Population Census and were obtained by using a new sample and revised questionnaire, they are not comparable with those in issues of this publication prior to January 1978. For details, see the explanatory notes of *The Labour Force, February 1978*, (6203.0).

- 5. In order to provide a series for earlier periods as comparable as possible with the February 1978 estimates, the unemployment estimates for August 1976 to November 1977 were revised. Information concerning the methods used in the revision is given in the explanatory notes of *The Labour Force*, *February 1978*, (6203.0).
- Since the estimates are based on information obtained from the occupants of a sample of dwellings they are subject to sampling variability; that is, they may differ from the figures that would have been produced if all dwellings had been included in the survey. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included in the survey. For example, the estimate of unemployed persons looking for full-time work in May 1978 (331,600) has a standard error of about 5,000 and therefore there are about two chances in three that the value that would have been produced if all dwellings had been included in the survey will fall within the range 326,600 to 336,600 and about nineteen chances in twenty that the value will fall within the range 321,600 to 341,600.
- 7. A change in the level of an estimate between two periods of time is also subject to sampling variability. The standard error of the decrease between April 1978 and May 1978 in the number of unemployed persons looking for full-time work (1,900) is 4,200 and therefore there are about nineteen chances in twenty that if all dwellings had been included in the surveys the estimate of movement would have been within the range -10,300 to +6,500. Further details about the survey and the reliability of estimates will be found in the monthly bulletin *The Labour Force* (6203.0).

Comparability of Survey Estimates and CES Figures

- 8. The survey estimates of unemployed persons looking for full-time work may differ from the number of persons registered with the CES (see Table 9) as not employed, awaiting placement in full-time employment, for a number of reasons, including the following:
 - (a) the survey estimates include some unemployed persons (particularly females) who did not register with the CES;
 - (b) they exclude persons who worked for one hour or more during the survey week, although they may have been registered with the CES – for example because they became unemployed during the week or worked for only short periods;
 - (c) they exclude persons registered as unemployed who find jobs or who are no longer looking for work but do not notify the CES of their changed situation;
 - (d) they represent averages over a period (see paragraph 2), whereas the CES figures refer to numbers registered on the Friday nearest the end of the month. This is particularly important at times when there are substantial

rises or falls in unemployment or in registrations with the CES;

(e) they are subject to sampling variability. (See paragraphs 6 and 7.)

Suspension of Seasonally Adjusted Series

9. As explained in previous issues of this publication, the move to the higher level of

unemployment since 1974 appears to have been accompanied by shifts in the pattern of seasonal variation. For this reason the publication of seasonally adjusted quarterly figures of unemployment has been suspended. The matter will be kept under review. Calculation of seasonally adjusted monthly figures will not be possible until results for two or three years are available.

⁽a) Comprises all persons who were still registered with the Commonwealth Employment Service (C.E.S.) at the Friday nearest the end of the month and who claimed when registering that they were not employed, and who were seeking full-time employment, i.e. 35 hours or more per week. They include persons referred to employers but whose employment was still unconfirmed, and persons who had recently obtained employment without notifying the C.E.S. All recipients of unemployment benefit are included. (See Table 10.) (b) Includes the Australian Capital Territory.

⁽a) Figures show numbers on benefit at the dates indicated. (b) State and Territory classification is based on location of office from which payment of benefit is made. (c) The figures shown are estimates.

3. JOB VACANCIES

The tables in this section contain (a) estimates of job vacancies derived from quarterly and annual surveys conducted by the ABS and (b) the numbers of vacancies registered with the Commonwealth Employment Service (CES).

Job Vacancies: Survey Estimates

- 2. Sample surveys of employers are conducted by telephone quarterly throughout Australia in February, May, August and November to obtain information about job vacancies. The first quarterly survey was conducted in May 1977. A larger sample survey is conducted annually by mail in March.
- 3. The surveys cover vacancies in private employment and in Australian, State and local government employment. All vacancies for wage and salary earners are included except those:
- . in the defence forces
- . in agriculture

Period

- . in private households employing staff
- . for waterside workers employed on a casual basis, and
- for employees of private employers (other than hospitals) not subject to payroll tax.
- 4. Included in the survey results are vacancies for all categories of employees, including managerial, full-time, part-time, permanent, temporary and seasonal employees; and adults, juniors, trainees, apprentices,

NEW

cadets, etc. For further details of the definitions of terms used and background and methodology see *Job Vacancies*, May 1977 (6231.0) and *Job Vacancies*, March 1977 (6218.0).

Comparability with Commonwealth Employment Service Statistics

- 5. For a number of reasons the estimates obtained from the surveys differ from the number of vacancies registered with the Commonwealth Employment Service (CES). The principal reason is that, because notification of vacancies is voluntary, many vacancies are not registered with the CES. Other reasons are:
 - (a) the survey estimates relate to vacancies immediately available for filling on the survey date, whereas the CES statistics relate to vacancies which were unfilled at the Friday nearest the end of the month and which employers claimed could be filled if labour were supplied immediately or within the following month.
 - (b) the coverage of the job vacancy surveys is somewhat restricted and the results are subject to sampling variability.
 - (c) the CES figures may include some vacancies already filled or cancelled by the date at which the figures are compiled, but about which the CES may not have been notified.
